EDUCATION

oct 2018 - present

B.Sc. Engineering (Honors) - Reading

Department of Computer Engineering, University of Jaffna

- Current GPA – 3.25
- Participated in RealHack 3.0 (2021) is organized by IEEE Student Branch of University of Kelaniya
- Member of "Unpraised" Music Society (2018 - present)

TECHNICAL STRENGTHS

- | | | |
|-------------------------|---|--|
| • Programming languages | - | Java
Python
JavaScript |
| • web development | - | ReactJs
PHP
SQL
Express
Tailwind |
| • other | - | React Native
MongoDB
MySQL
GIT |

RELATED COURSEWORK

- **Academic calender management system for faculty (July 2022 – August 2022)**

- Project was to develop a new calender management system overcoming the flows in the current system.
- In this project we have used the following
 - Next JS - To develop the frontend side of the application
 - Tailwind CSS – To rapid development of the styling of frontend
 - Git – To manage the project's code base
 - Ms power automate - To automated notifications
 - vercel - To deploy the application
- https://github.com/lsuruAkalanka/academic_calendar

- **Ai based targeted advertising system (July 2022 – August 2022)**

- Project was to develop any intelligent agent. We chose to build a targeted advertising system which uses Ai to predict the best ad to show based on the audience.
- In this project we have used the following
 - python - To develop the application
 - Git – To manage the project's code base
 - opencv - For image processing
 - Jupyter Notebook - to train the machine learning model
- https://github.com/hiranEranda/ai_base_targeted-adverticing_system

- **Seller review and price information system (July 2022 – August 2022)**

- System was used to show retail prices to consumers and to collect complaints on sellers if any as a method to regulate the retail prices during covid crisis.
- In this project I have used the following
 - Reactjs - To develop the frontend side of the application
 - NodeJs, Express - To develop the backend side of the application
 - phpMyAdmin - To manage the mysql database
 - sql - To query the database
 - Git – To manage the project's code base
- <https://github.com/hiranEranda/db-project-mern>

OTHER PROJECTS

- **SOCIAL-MARKET NFT (Oct 2022 – present)**

- This is a freelancing object based on Ethereum Chain and Marketplace of NFTs.
- In this project I have used the following
 - React JS - To develop the frontend side of the application
 - Solidity – To implement smart contracts for the NFTs and Marketplace
 - Moralis – To interact with the blockchain, manage the primary database and create the server
 - Remix IDE – To program solidity and create smart contract
 - Git – To manage the project's code base
- <https://github.com/hiranEranda/social-market>

- **My portfolio (july 2022 – present)**

- This is to use as my personal portfolio
- In this project I have used the following
 - React JS - To develop the frontend side of the application
 - Tailwind CSS – To rapid development of the styling of frontend
 - Git – To manage the project's code base
- <https://github.com/hiranEranda/portfolio-react-tailwind>
